CERTIFICATE

This is to certify that the thesis entitled, "**An Investigation on Texture-Property Correlation in Cold Rolled Non-Oriented Silicon Steels**" submitted by **Dibyaranjan Prusty (108MM007)**, **Hitendra Kumar Pradhan (108MM041)** in partial fulfillment of the requirements for the award of **Bachelor of Technology Degree in Metallurgical and Materials Engineering** at National Institute of Technology, Rourkela is an authentic work carried out by them under my supervision and guidance.

To the best of my knowledge, the matter embodied in the thesis has not been submitted to any other University/Institute for the award of any Degree or Diploma.

Date:

Prof. Santosh Kumar Sahoo
Dept. of Metallurgical and Materials Engineering
National Institute of Technology
Rourkela-769008

Acknowledgement

We take this opportunity to express our deep regards and sincere gratitude to our guide **Prof. Santosh Kumar Sahoo** for his constant guidance and concern throughout the project. He will always remain be a constant source of inspiration for us. We also express our sincere gratitude to, **Dr. B.C.Ray**, HOD, Metallurgical and Materials Engineering for providing valuable departmental facilities. We are very thankful to **Prof. Indradev Samajdar** of IIT Bombay, **Prof.B.B.Nayak** of Ceramic department NIT Rourkela, **Prof. S.karmakar** of Electrical department of NIT Rourkela and **Prof. D.K. Pradhan** of Physics department of NIT Rourkela for their constant support in conducting experiments. We extend our thanks to all the professors who have guided, suggested and helped us during the project. We are also thankful to technical assistants of Department of Metallurgical and Materials Engineering, NIT Rourkela, for their constant practical assistance and help whenever required. We would also like to thank all the staff members of **Metallurgical and Materials Engineering department** and everyone who in some way or the other has provided us valuable guidance, suggestion and help for this project.

Abstract

Soft magnetic materials like cold rolled non-oriented (CRNO) steels are used in electrical appliances like motors, generators small transformer cores due to its superior magnetic permeability and low watt loss and less magnetic anisotropy signifying uniform magnetic properties in all directions. The application of CRNO steels demands uniform property in all angular directions. Keeping this in mind the objective of the present study is to find out the textural and property change in all angular directions of CRNO steel sheets and correlate texture-property. CRNO steel sheets of different silicon percentages (1.4%, 1.52%, 1.88%, and 2%) were observed in the present study. Four different sets of samples were made from the CRNO sheets: (1) samples along rolling direction, (2) samples at 30° to the rolling direction, (3) samples at 60° to the rolling direction and (4) samples at 90° to the rolling direction. Then the textural, electrical and magnetic properties were investigated using standard techniques. X-ray diffraction (XRD) and electron backscattered diffraction (EBSD) were used for bulk- and micro-texture measurements respectively. While four-probe method was used for electrical resistivity and pulse field hysteresis loop tracer was used for magnetic property measurements. The results showed different texture and magnetic properties in all the CRNO samples.

Keywords: CRNO steel, Silicon Steel, Electrical Steel, Texture, Magnetic Permeability, Watt Loss.
